Arbor Care

The trees in today's man-made landscapes require care that accounts for health, beauty, safety, functionality, and more. Almstead's Arbor Care division deals mainly with what is known by arborists as *tree surgery* (the physical alteration of a tree). We offer all phases of pruning, depending on the needs of a given situation. We also install hardware in trees to strengthen structure or prevent lightning damage. Additionally, Almstead is skilled in both the planting and transplanting of trees. As a full service firm, we

also perform tree removals and stump grinding. Most importantly, all of our services come with the expert recommendations and guidance of a certified arborist.

Why Almstead?

Tree care is a problem-solving business, and the best solutions come from knowledgeable experts. At Almstead, our arborists are professionally trained and certified, so you can trust their recommendations. As a local company, we're also well-versed in the municipal matters that may pertain to a particular tree. Through every step of the tree care process, our staff is dedicated to providing the best experience for the customer possible. From start to finish, Almstead delivers the professional tree service we believe our clients (and their trees) deserve.

Our Services

- Custom tree pruning
- Hazardous tree evaluation and testing
- Tree removal
- Stump grinding
- Cabling and bracing
- Lightning protection
- Expert shrub pruning
- Cavity and wound repair
- Woodlot management
- Transplanting
- Specimen planting

Custom Pruning

We have many different expectations of trees and shrubs that relate to their shape: from aesthetics to shade to structural integrity. At Almstead, all of our pruning is performed according to strict industry standards that account for these factors.

Why prune?

- Remove hazardous deadwood
- Train young trees for proper structure
- Rejuvenate the growth of mature shrubs
- Correct for structural imperfections to enhance performance during storms
- Prevent the spread of insect and disease problems with sanitation pruning
- Clear select branches to reveal a view
- Thin out canopy for better light filtration
- Provide clearance for structures and paths
- Enhance overall shape of trees and shrubs

Specimen Planting

Proper planting practice is critical to establishing a healthy tree. Whether seeking a replacement or adding to a landscape, consult with an Almstead arborist to find the right tree for your location and ensure that it's planted correctly.

Tree Removal

Sometimes, as in the case of a hazardous tree, circumstances warrant tree removal. Our crews are skilled in the safe and efficient removal of trees as well as stump grinding services.
