The Science of Co-Managing Energy and the Environment - Profitably

We welcome the opportunity to show how our software develops a computer model of a facility that will produce truly unheard of savings.
IT IS TRULY A WOW!

We believe we are one of the first to use this technology.

Puzzled about how to Reduce Energy Cost?

1. **Energy Management** — EYE Chart System

2. **LED Lighting**

The three steps to a **ZERO** utility electric bill

3. **Energy Generation**

HelloEnergy

If you can't measure energy you can't manage it!

LED Lighting

①

Our **Energy Management** software produces a powerful energy model for our clients using their utility bills and audit studies we conducted. This includes managing via the EYE Chart (Engineering Your Energy) System that takes 15 seconds a month to read. **Management without the time consuming complexities**. Subsystems studies on LED Lighting, preventative maintenance for HVAC, Energy Generation, Environment, Financial, ROI, What if Analysis, etc. can be analyzed and tested in seconds to provide Best Practice energy decisions for our clients **before incurring any cost**.

②

LED Lighting - reduces energy use and cost by 45% to 75%+ for most clients and has a ROI of less than 3 years. Our Engineering Cost and Savings Analysis irrefutability substantiates that, prior to you making the investment.

③

Energy Generation - on-site generation means no loss of energy getting it to your site. This is a significant benefit for all types of generation:

Solar: electricity and heat - with no moving parts and free fuel forever

Co-Generation: generate electricity and get free heat and air conditioning

Significant tax credits, depreciation and financing that make the first and every month profitable.
